

## Bachelor of Biomolecular Science (International students)

### Program code

1350

### Commencing in

Exit Point Only

### Available at

Nathan Campus

### Duration

3 years full-time

### Credit points

240

## Important Notes

This program is only available to International students articulating from the Nanjing University of Chinese Medicine (NJUCM), China.

## About this program

Biomolecular science is the most rapidly developing area in science at the crossroads of the biological, chemical, physical and computational sciences. Founded on the basic disciplines, it encompasses chemistry, biochemistry, molecular biology, the new genetics, genetic engineering, genomics and proteomics, structural and systems biology and bioinformatics that are driving the current extraordinary advances across biotechnology and medicine.

Today's discoveries in the biomolecular sciences lead to tomorrow's applications in fields ranging from medicine and health care to food, agriculture, environmental protection and the biotechnology industries, opening up a wealth of career options and the opportunity to make a difference in your career.

This advanced program is designed to train a new generation of biomolecular scientists to meet the growing demand for professional, workplace-ready, research-ready graduates with high-level expertise and skill.

Code	Program title	Campus	Intake
1540	Bachelor of Biomolecular Science (Honours)	Nathan	Trimester 1 and Trimester 2
1350	Bachelor of Biomolecular Science (this program)	Nathan	Exit point only

## My career opportunities

### My career opportunities

This program keeps your career options open, and offers a diverse range of employment outcomes dependent on your developing interests and career goals.

As a biomolecular scientist you will be equipped for a wide range of professional and research career opportunities in health and medical research institutes, public health programs, medical diagnostics, therapeutics, pharmaceuticals, industrial, agricultural and environmental biotechnology industries, agribusiness, food production, processing and manufacturing, environmental monitoring, protection and sustainability, research and development in a wide range of research institutes and government agencies such as CSIRO; government policy development, regulatory monitoring, and science education.

## What are the fees?

### International students

An International student is one who is not:

- an Australian or New Zealand citizen or
- a Pacific Engagement visa holder or
- a person who has Australian permanent resident status.

**Indicative annual tuition fee**

The indicative annual tuition fee is calculated based on a standard full-time study load which is usually 80 credit points (two full-time trimesters).

The indicative annual tuition fee is based on current conditions and available data and should only be used as a guide. These fees are reviewed annually and are subject to change.

**Tuition fees**

- An International student pays tuition fees.
- Students are liable for tuition fees for the courses they are enrolled in as at the census date.
- The tuition fee for students who commence their program prior to 2014 is charged according to the approved program fee for the trimester in which the student commenced the program.
- The tuition fee for students who commence their program from 2014 onwards is charged according to the approved program fee for the trimester in which the student is enrolled.

**Program fees for the Bachelor of Biomolecular Science (1350)**

Fees for this program can be found on the Programs and Courses website in the "Overview and fees" section. Select your commencing year to view your fees.

**Changing programs**

If an International student changes to a different program they will be subject to the approved program fee for the trimester in which they are enrolled.

**Permanent resident status**

If an **undergraduate student** obtains permanent resident status in Australia after commencing study in a program, and the student can provide evidence of permanent resident status prior to the census date (of the trimester in which they are enrolled), the student will be provided with a domestic fee-paying place.

The student may then apply for a Commonwealth supported place at the next admission period provided that the student satisfies the conditions for transfer from a domestic fee-paying place to a Commonwealth supported place as set out in the [Undergraduate Programs Admission Policy](#).

If a **postgraduate student** obtains permanent resident status in Australia after commencing study in a program, and the student can provide evidence of permanent resident status prior to the census date (of the trimester in which they are enrolled), the student will automatically be considered for a Commonwealth supported place (subject to availability) or a domestic fee-paying place as applicable for the program.

If a **research student** obtains permanent resident status in Australia after commencing study in a program, and the student can provide evidence of permanent resident status prior to the census date (of the trimester in which they are enrolled), the student will automatically be considered for a Commonwealth Government Research Training Program (RTP) Fee Offset or a domestic fee-paying place as applicable for the program.
